

Team 18: Just Keep Swimming

Karley Babcock, Reese Kaiser, Haley Marco, Tyler Vos, Tiffany Waanders

While out with friends and family on a boat, it is common to desire a quick swim. There are groups of the population that are unable to enjoy this pleasure because of the inaccessibility of the boat to reach the water. These people include both elderly people whose mobility has decreased due to age and health complications as well as individuals with any physical disabilities. Our device will safely be able to transport people of limited capability into and out of the water, depending on their needs, to and from a standard pontoon boat. The user will be able to operate the device without assistance or any excessive manual labor.
