

FYRES Coordinator 2018-2019

Carolyn Lindemulder

Carolyn Lindemulder is a senior from Santa Clara, California. She is studying biology, with minors in geography and data science. She took the FYRES class as a freshman and studied the environmental factors that affect Pitcher's thistle, a federally threatened plant that grows on coastal dunes around the Great Lakes. She returned to the class as a mentor the following year and studied the characteristics of the slipface of a large parabolic dune in Hoffmaster State Park. She became FYRES coordinator

in her third year and is excited to implement some new ideas for the position as she returns for a fourth and final year.
