

# TEAM 7: TURRET TITANS

Turret Titans is working to create a safer and more protected alternative to the conventional method of operating a military turret. Rather than having the operator placed atop the vehicle, the new turret system will be operated from within the protection of the vehicle. The operator will utilize a joystick to control and fire the turret, and a VR vision system will allow the operator full view of the vehicles surroundings. Through this project, Turret Titans' hope is that American soldiers' lives are saved as a direct result of this safer turret design being implemented in new and existing military vehicles.
